

For the following format specifiers, PLEASE FILL OUT COMPLETE INFORMATION. It will not be sufficient to copy and paste information you find on the internet. For your own success in this lesson you should articulate your understanding of how each of these specifiers work.

%f	<p>When do you use it? To display a floating value in a numerical(decimal) format</p> <p>How does it work? Float arguments are converted to double</p> <p>Provide examples: double = 12 System.out.format("my favorite number is %f");</p>
%d	<p>When do you use it? Used for int format</p> <p>How does it work? Expressions are converted to pointer expressions, compounds integer expressions</p> <p>Provide examples: int k = 14 System.out.format("I had %d pieces of sushi today");</p>
%s	<p>When do you use it? Used for string format</p> <p>How does it work? Specifies how much space to put for the indent, allocates space for the string that follows</p> <p>Provide examples: String month = April System.out.format("i was born in %s");</p>
